

CMA Lesson Plan Format (based on CLIA's 2011 Lesson Plan Format)

<b>Lesson Title &amp; Arts Area</b>	Personalized Cyanotypes, Visual Arts and Science
<b>School &amp; Grade Level</b>	Columbia Museum of Art, High School
<b>Arts Educator Lesson Designer</b>	Written by: Jimmy Hiller, Community Programs Coordinator
<b>Short statement about designer &amp; lesson development</b>	<p>Jimmy Hiller works at the Columbia Museum of Art, in their Education Department as the Community Programs Coordinator. He has his Bachelor's in Fine Arts degree with a concentration in printmaking from the University of South Carolina.</p> <p>This lesson has been developed for students in high school for the Columbia Museum of Art's solar power and arts initiative. Developed for educators to use in a classroom setting.</p>
<b>Unit Description Big idea? Essential questions?</b>	<p><b>Lesson Description</b>- In the lesson students will investigate the use of solar power and the effects of solar power on art. Students will create a cyanotype from a photograph using the sun.</p> <p><b>Big Idea</b> - This lesson will explain the importance of solar energy as it pertains to art.</p> <p><b>Essential Questions:</b></p> <ul style="list-style-type: none"> <li>- What does solar energy have to do with art?</li> <li>- How can solar energy be used in a museum?</li> <li>- Why is solar energy important?</li> <li>- What effect does sunlight have on art?</li> <li>- Can a work of art be made with sunlight?</li> </ul>
<b>S. C. Standards Addressed</b>	<p>Visual Arts  <b>VAH1</b>-1.1, 1.3, 1.4, 1.5 <b>VAH2</b>-2.1, 2.2, 2.3 <b>VAH3</b>- 3.3  <b>VAH2</b>- 1.2, 1.4, 1.5 <b>VAH2</b>-2.1, 2.2, 2.3 <b>VAH2</b>-5.2  <b>VAH4</b>- 1.1, 1.2, 1.3, 1.5 <b>VAH4</b>- 2.1, 2.2 <b>VAH4</b>- 3.1, 3.2, 3.3</p> <p>Science  H.E.1A.1, H.E.3A.1, H.E.5A.2  H.P.3F.3, H.P.F.4,  H.C.6A.1</p>
<b>Instructional Objectives</b>	The student will learn the vocabulary used in the lesson, (Luminosity, Renewable, Solar, Watt, Cyanotype, Design)
<b>Description of Instruction</b>	Instruction will begin with the teacher reinforcing art and science vocabulary found in the lesson plan. The teacher will then give a step by step instruction on how to complete the cyanotype project.
<b>Teacher Procedures</b>	<ol style="list-style-type: none"> <li>1. The teacher will give step by step instructions on how to complete the project. Showing a finished example for students to reference.</li> <li>2. The teacher will pass out all supplies needed for the cyanotype.</li> <li>3. The teacher will instruct students to find and or create a high contrast photo to be transferred onto a transparency.</li> <li>4. The teacher will instruct students on how to prepare the cyanotype paper (light sensitive). The light sensitive paper goes onto a stiff board (cardboard or something similar) with the transparency on top of it. *for extra support a piece of Plexiglas can be added on top with bulldog clips</li> <li>5. The teacher will help students as they place their high contrast photo or drawing</li> </ol>

CMA Lesson Plan Format (based on CLIA's 2011 Lesson Plan Format)

	<p>in the sun. The exposure time should only be about 2 minutes or until you see the paper turning a pale blue/white.</p> <p>6. The teacher will have the students rinse their light sensitive paper under water thoroughly until the image is a dark blue. Hang to dry.</p>
<b>Student Activities</b>	<ol style="list-style-type: none"> <li>1. The student will listen to instruction and gather supplies to be used.</li> <li>2. The student will create a high contrast drawing, or find a high contrast photo to be prepared onto a transparency. **This can be done in many different ways. Sharpie on transparency, using Photoshop to make any digital photograph high contrast, or using a black and white photograph with high contrast.</li> <li>3. The student will prepare the light sensitive paper on a stiff board. (make sure to cover the paper so no light is touching it at all times)</li> <li>4. The student will place their transparent image on top of the light sensitive paper. (use Plexiglas as a added support with bulldog clip)</li> <li>5. Expose the paper in the sun for up to 2 minutes, or until the paper is a pale blue/white.</li> <li>6. Rinse the paper under water or in a tray until the image is a dark blue.</li> <li>7. Hang to dry.</li> </ol>
<b>Assessment</b>	<p>The students will be assessed on the completion of their projects. It will be short term assessment and based on: following rules, interaction during discussion, as well as creativity and craftsmanship.</p>
<b>Materials Needed</b>	<p>Light Sensitive paper (<b>nature print paper</b> from dick blick)</p> <p>Transparency paper</p> <p>Cardboard</p> <p>Water tray/sink</p> <p>Plexiglas and bulldog clips (if you need to keep the paper secured, can be done alternative ways)</p> <p>Sharpie (for drawing on transperacny)</p> <p>The sun (for exposure)</p>
<b>Resources</b>	<p>CMA's Collection; <a href="http://www.dickblick.com">www.dickblick.com</a>;</p> <p><b>The Book of Alternative Photographic Processes</b> by Christopher James</p>
<b>Attachments</b>	<p><u>Luminosity</u> – The relative quantity of light</p> <p><u>Renewable</u>- Capable of being replaced by natural ecological cycles or sound environmental management practices</p> <p><u>Solar</u>- Produced or operated by the sun's light or hear</p> <p><u>Watt</u>- A basic unit for measuring electrical power</p> <p><u>Cyanotype</u>- is a photographic printing process that produces a cyan-blue print.</p> <p><u>Design</u> - A plan, or to plan. The organization or composition of a work; the skilled arrangement of its parts.</p>
